

Vishnuprasad Kamalon

Software engineer · Frankfurt, Germany

I joined NarolQ as part of its founding engineering team. In a team of five, I build services from scratch and maintain them, with work spanning system design, architecture, and AWS infrastructure. My background spans ERP software, insurance technology, large-scale data systems, and taking a company's product from idea to launch.

EDUCATION

Kannur University
Bachelor of Technology
Computer Science and Engineering
Jul 2013 — Mar 2017

Experience

NarolQ GmbH ↗

Sep 2025 — Present

Staff Engineer · Frankfurt

- Joined the founding engineering team, building services from scratch for ETF issuance and operations.
- Work in a team of five to design, implement, and maintain systems, from initial architecture through ongoing operation.
- Look after AWS cloud infrastructure alongside application development and system architecture.

Clark Holding SE

Nov 2021 — Sep 2025

Senior Software Engineer · Frankfurt, Germany

- Integrated a third-party AI bot that increased in-app appointment bookings by 10% in Q1 2025.
- Reworked an inefficient Redis data-fetching operation, reducing critical page loads from over 80 seconds to under 5 and eliminating request timeouts.
- Reduced build times by 40% by improving Jenkins and Kubernetes configurations in the CI/CD pipeline.
- Migrated the primary Amazon RDS PostgreSQL database from version 11 to 13 without downtime.
- Built a Salesforce Marketing Cloud integration to deliver campaign notifications to the in-app message center.
- Developed a Python CLI with LangChain and Google Gemini for internal debugging and command-line assistance.

Synup Digital

May 2019 — Nov 2021

Software Engineer · Bangalore, India

- Developed voice-command functionality for Google Assistant, Alexa, Siri, and other platforms, contributing to a 15% increase in product sales.
- Built an event-driven backend with Kafka and RabbitMQ, using Elasticsearch and Redis to support high-throughput services.
- Developed an Amazon Redshift reporting tool to aggregate and process more than 2 billion records.
- Expanded automated test coverage from 10% to 40%, helping reduce production bugs by 20%.

Imeify

Jul 2018 — Jan 2022

Co-founder & Technical Lead · Kerala, India

- Led technical strategy from concept to launch, reaching more than 10,000 users in the first 90 days.
- Built the platform's Node.js backend, React admin dashboard, and native Android application.
- Maintained a 99% crash-free user rate through testing and an efficient bug-resolution workflow.

Foradian Technologies

Jul 2017 — May 2019

Software Engineer · Bangalore, India

- Owned development of Fedena ERP modules, including Applicant Enquiry and Registration, for educational institutions.
- Delivered more than half of the core REST APIs for the Fedena Connect mobile app.
- Optimized Finance module SQL queries, reducing data retrieval times from 90 seconds to under 10.
